

Adaptive Index™ Report

for Project Management

Participant B

Company ABC

April 2008

Developed by: Dr. Kenneth Rabinowitz

The Adaptive Index™

Thank you for taking the Adaptive Index. I hope the Adaptive Index provides you with further insight about your "adaptive self - how you adapt to your world, as you respond to change, problems, tasks, people and roles."

The Adaptive Index was developed to help you discover your cognitive, work and interpersonal patterns. You'll find a series of graphs showing you how adaptive you are in five different scales referred to as the DEBSI. Each graph is followed by interpretations that explain your personality and adaptability. At the end of the graphs section, you'll find a comprehensive summary of your work style; your most natural and frequently used patterns.

The Adaptive Index is the only instrument that measures three key elements of performance –

- ♦ **Personality**; your natural and predictable behaviors, as well as your strengths and weaknesses. The Personality Section describes your "reflexive" behavior (which accounts for approximately 90 - 95% of your thoughts and actions) on five scales; results, change, moderation, process and quality orientations.
- ♦ **Adaptiveness**; how adaptive you are in seven behavioral dimensions: *how you think, listen, communicate, relate, work, manage problems, conflicts and change.*
- ♦ **Work Style**; how you perform in a designated role such as: leadership, sales, service, project management, team member or general employee.

The Adaptive Index provides you with an in-depth review of your "adaptive" self, as it shows you how to expand your thinking, decision making, communication, listening, relationships, productivity and the bottom line; job performance.

The Adaptive Index "generalizes about your natural tendencies and patterns" by identifying patterns of behavior that you emphasize and rely on. If you read something you disagree with, please keep in mind that we are discussing your natural tendencies, not behaviors that you may have learned to modify or improve.

I hope you enjoy the Adaptive Index. And you rediscover what you probably already know about yourself in one form or another. You should find yourself smiling and agreeing with the majority of what you read.

I also hope that you take advantage of this opportunity to learn more about your adaptive self, as you learn the secrets of adaptive behavior. Our studies of adaptive people show that "adaptiveness" is positively correlated with success, whether it is problem solving, being more productive, handling change and uncertainty, or building more effective and fulfilling relationships. We've found that top performers, regardless of their field (management, sales, service, operations, technical, research, etc.) differentiate themselves by their ability and willingness to *adapt*. That their ability to adapt is the single most important factor in their success!

If you have any comments, questions or concerns, please contact me at drken@consultpdg.com or call me at 800-836-5870. I also hope you will contact us if you would like to know more about our books, training and coaching programs designed to help you develop your AQ - Adaptive Intelligence.

Enjoy!

Dr. Kenneth Rabinowitz,
Developer of the Adaptive Index

Introduction

What Your Report Contains

Your Adaptive Index Report consists of the following sections -

Your Personality

- ♦ This section measures and describes your personality, using the DEBSI as the key concept. DEBSI measures the degree that you emphasize or de-emphasize - results (D), change (E), moderation (B), process (S) and quality (I).
- ♦ You will receive an "individualized" analysis of your personality, a style description and a DEBSI Graph showing you your behavioral tendencies.
- ♦ You'll receive a ranked list of your strengths and weaknesses.
- ♦ The Consistency Analysis Graph tells you how consistent you are in each of the DEBSI patterns. This component will show you not only how consistent you are in using each of the DEBSI traits, it will also measure how valid and accurate your report is.

Your Adaptability

Cognitive Adaptiveness

- ♦ The Cognitive Graph tracks your thinking and decision making patterns. This graph measures the degree that you are linear, creative, pragmatic, circular and analytical in your cognitive style. It shows you how to think more adaptively.

Listening Adaptiveness

- ♦ The Listening Graph measures your listening patterns. It shows you how you tend to listen; the degree that you are a consequential, conceptual, concrete, contextual and complex listener. You'll learn how to broaden your listening style, as you become an adaptive listener.

Communication Adaptiveness

- ♦ The Communication Graph measures your communication patterns. It measures how you express yourself; the degree that you are pointed, persuasive, parallel, practical and precise as a communicator.

Interpersonal Adaptiveness

- ♦ The Interpersonal Graph measures your relationship patterns; how you relate to others. It measures how directive, supportive, logical, responsive and expressive you are with others.

Work Adaptiveness

- ♦ The Work Graph measures your work patterns; how you perform tasks, projects and responsibilities. You'll receive a graph showing you how efficient, reliable, thorough, implemental, and innovative you are.

Problem Adaptiveness

- ♦ The Problem Management Graph measures your response to both conflicts and problems. It analyzes how controlled, constructive, confrontive, collaborative and challenging you are in handling problems and conflicts.

Change Adaptiveness

- ♦ The Change Management Graph measures how you adapt to change; how you deal with the dynamics between the new and old. This graph will tell you what your change management style is; whether you are steady, integrative, encouraging, driven and balanced in your approach.

Your Work Style

- ♦ This section, examines your work style (for example - management, sales, service, project, individual). Here you will learn about your performance patterns and your overall style. You'll discover how you tend to operate within a particular role. And how you can become more effective as you learn the "secrets" of adaptive performance.

Your Personality

Your Personality

The DEBSI Personality Graph - Your personality patterns

On page 8, you'll find your DEBSI Personality Graph. This graph measures your personality traits on five scales -

- ♦ **Results** orientation - the D Factor
- ♦ **Change** orientation - the E Factor
- ♦ **Moderation** orientation - the B Factor
- ♦ **Process** orientation - the S Factor
- ♦ **Quality** orientation - the I Factor

We estimate that approximately 90% of your thoughts and actions are "personality based." And that most of what we do is shaped by underlying behavioral patterns or traits. These behaviors (DEBSI patterns) are well imbedded in our personality, and are both reflexive and unconscious.

As your review your DEBSI Personality Graph, you'll discover –

- ♦ What your personality is like; how you think, adapt, work, communicate and relate to others.
- ♦ What motivates and de-motivates you.
- ♦ Which of the DEBSI patterns you rely most and least on, as you adapt to your environment.

We begin to develop our personality in infancy and continue to refine it through aging. Our personalities are fairly well established by early adulthood, and are less likely to change very much, at least through conscious effort.

The 90% factor suggests that most of our thoughts and actions are unconscious, reflexive and patterned ways of adapting to our environment. While we often choose to vary our "conscious" behavior; most of our actions are automatic, unconscious and reflexive. Again, we estimate that 90% of our behavior is personality based, suggesting that our personalities are fairly fixed and automatic. While we can change our behavior and make all types of improvements, our personality is less subject to "conscious change."

Your Personality

The DEBSI Factor

The DEBSI Factor characterizes our personality traits as well as our behavioral patterns. Each DEBSI pattern is an "adaptation" or adjustment to the situation we experience.

Each DEBSI pattern is driven by different set of "motivators". As a result, each cluster takes on certain common characteristics. The DEBSI Factor Table below, summarizes each of the DEBSI patterns.

The DEBSI Factor Table

PATTERN	DESCRIPTION
D	The D score represents the degree that you emphasize RESULTS. The higher your D score, the more decisive, linear, driven, directive, efficient, bottom-line and results oriented you are.
E	The E score represents the degree that you emphasize CHANGE. The higher your E score, the more creative, persuasive, engaging, expressive, flexible, big picture and change oriented you are.
B	The B score represents the degree that you emphasize MODERATION. The higher your B score, the more pragmatic, cautious, hands-on, realistic, responsive, implemental, controlled and moderation oriented you are.
S	The S score represents the degree that you emphasize PROCESS. The higher your S score, the more practical, reasonable, supportive, steady, collaborative, reliable and process oriented you are.
I	The I score represents the degree that you emphasize QUALITY. The higher your I score, the more analytical, logical, precise, thorough, fair-minded, rational and quality oriented you are.

Your Personality Style

You have a Developer personality style. Your personality is characterized by the following traits -

Developer Traits			
Clear	Bold	Definitive	Decisive
Concise	Bottom line	Efficient	Assertive

As you can see in the graph below, your personality is broken into percentages. Each of the DEBSI patterns measures how much emphasis and de-emphasis you place on the five traits as you naturally respond to your environment.

Your DEBSI Personality

Scoring Meaning

- 0 - 9%** **Very Low score** - means you rarely rely on that trait. You find it difficult to function this way for sustained periods of time.
- 10 - 16%** **Low score** - means you de-emphasize that trait. You emphasize this trait only when you need to and find it difficult to sustain.
- 17 - 23%** **Moderate score** - means you utilize this trait when you need to, but in a moderate and balanced way. You prefer a less extreme use of this trait.
- 24 - 30%** **High score** - means that you rely on this trait, and are comfortable utilizing it. This trait is an important aspect of your personality.
- 31 - 50%** **Very high score** - means that you depend strongly on this trait. You strongly emphasize this trait whenever you can. This trait characterizes your personality.

PATTERN	INTERPRETATION
D Results	Your D score is high, suggesting a strong results orientation. Although you think the bottom-line, you also recognize the importance of establishing a "workable" process. You like order and organization, and are bothered by inefficiency and delays. You are productive and expect the same of others. You are goal oriented and favor a planned approach. You try to be direct and clear with others. You are assertive and direct in conflict situations. You are decisive, linear, direct, demanding, clear, driven, productive and efficient. You drive yourself and others to produce. Your results orientation is a significant characteristic of your personality.
E Change	Your E score is moderate. This means that you balance the new with the old. You are as interested in change as you are in continuity. You are less comfortable with extreme states of either change or consistency. Instead you prefer a balance between these two factors. You try to balance the need for change with the need for stability. You are comfortable with a certain level of process and procedure. You are flexible and creative to a point. You are more comfortable with situations that aren't too unstructured, spontaneous or loose. You are a moderate E.
B Moderation	Your B score is moderate. You balance moderation with risk. As a result, you are willing to take certain risks, when and if you feel it is justified. You tend to be reasonable, flexible and responsive to others. You prefer to be "situational" – you try to judge each situation before you react to it. You are a moderate reactor; you try not to overreact to situations. You look for ways to collaborate and accommodate others. In general, you are reasonable with others. You are an anchor of reality. You are a moderate B. You prefer not being overly cautious and constrained, but respect and understand the need for a certain level of caution and restraint.
S Process	Your S score is moderate. You balance the need for process with the need for results. Additionally, you try to strike a balance between consistency and variability. You prefer a moderate level of structure and process. While you are comfortable with process, you become frustrated with too much procedure. You work best when there is a certain level of flexibility. Although you are reliable, dependable and steady much of the time, you also like to have a certain level of freedom and flexibility. You become less comfortable in situations that you feel are highly structured and procedural. You are a moderate S.
I Quality	Your I score is moderate. You find a balance between being accurate and efficient. While you prefer situations that involve less depth and detail, you are analytical, logical, precise and thorough enough when you need to be. You are as comfortable with the big picture as you are with details. You know when to go into more depth and when to be more efficient. You are flexible in your use of the I trait. You try to find a "happy medium" when dealing with quality and efficiency.

Your Personality - Strengths

Primary Strengths

The following six strengths were identified and ranked by you out of a group of 48 possible strengths to choose from. These strengths are "reflexive" qualities you have developed over a lifetime of learning. Reflexive behavior is automatic and without conscious thought.

While these strengths are important elements to your success, you may want to consider that "your strengths often become your weaknesses, if you take the strength to an extreme." For example, being a hard worker when taken to the extreme can easily produce workaholic tendencies. Another example, being tactful when taken to the extreme can mean you are being too indirect and not assertive enough.

There are four strategies to help you maximize your strengths –

- 1 Stop yourself from becoming too extreme and excessive in that behavior.
- 2 Try to put yourself in situations that capitalize on your strengths.
- 3 Be as "adaptive" as you can in applying your strengths. There are many situations that require less of that behavior.
- 4 Appreciate your strengths. It is better to focus on what you do well, than on what you don't do well. This strategy doesn't suggest that you deny or ignore your weaknesses and failures. Instead it means, "don't get down on yourself."

Your Top 6 Strengths	
1	Outgoing
2	Resourceful
3	Empathetic
4	Goal oriented
5	Direct
6	Deliberate

Your Personality - Weaknesses

Primary Weaknesses

You were also asked to identify and rank your six most significant weaknesses from a list of 48 possibilities.

These weaknesses are also reflexive; they are innate behaviors that fail to produce the results you want in either your work or your relationships. Most weaknesses are well ingrained into personality and are difficult, if not impossible, to eliminate.

Here are a few strategies to help you "manage" your weaknesses –

- 1 Don't dwell on your weaknesses; it becomes debilitating. Instead, be aware of them.
- 2 Don't become defensive about your weaknesses. We all have them. There isn't anyone who can boast they are perfect. Never has been, and never will be.
- 3 Learn how to minimize your weaknesses. Try to conceal them by doing the types of things that make your innate weaknesses less obvious or harmful.
- 4 Don't compare yourself too much to others. There is always someone better at something you do. Instead, learn what people do well, and if you can, apply it to your situation without being fake or phony.
- 5 Practice continuous improvement – as long as you don't obsess about it. Try to learn and improve, but also accept who you are. Again, we each have weaknesses. The only difference is which behaviors we are weaker in, and how well we minimize them.

Your Top 6 Weaknesses	
1	Not efficient enough
2	Too stubborn
3	Too competitive
4	Too scattered
5	Not concise enough
6	Not sensitive enough

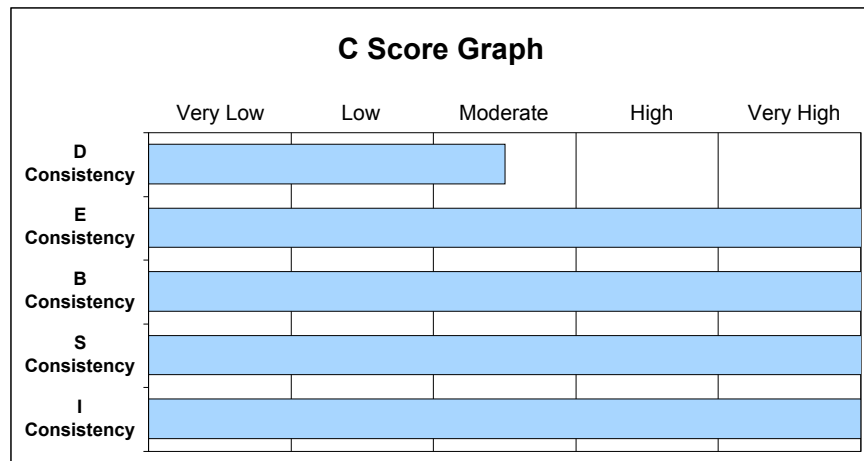

Your Personality - Consistency Analysis

Consistency Analysis

The **C Score Graph** below, measures consistency, which is defined as "how likely you are to adhere to a particular tendency."

Please note that your DEBSI has nothing to do with consistency. Whether your DEBSI score is low, moderate or high, consistency tells you how likely you are to apply that behavioral tendency.

- ♦ If your C Score is lower, it suggests that you are less consistent and more erratic in that behavioral tendency.
- ♦ If your C Score is moderate, you exhibit that tendency with some degree of consistency.
- ♦ If your C Score is high, you are consistent in that behavioral tendency; you rely heavily on that trait.

Trait	C Score	Interpretation
D Consistency	Moderate	You are moderately consistent in your high D tendencies.
E Consistency	High	You are consistent in your moderate E tendencies.
B Consistency	High	You are consistent in your moderate B tendencies.
S Consistency	High	You are consistent in your moderate S tendencies.
I Consistency	High	You are consistent in your moderate I tendencies.

Your Adaptability

Your Adaptive Behavior

Adaptability

Section Two measures your **adaptability** – *"your willingness and ability to adjust successfully to different needs, changes, problems and relationships."*

Adaptability is "agility". It's the agility to "produce the right results, the right way". Adaptability means making the right decision, communicating effectively, building an effective relationship or being productive.

Our research studies on "high performance and success," have found that the single most important factor behind successful performance is "adaptability - the agility to produce the right results, the right way." People who are more successful in both their work and relationships are significantly more adaptive.¹ I refer to this as AQ™ - Adaptive Intelligence.²

We've found that the higher your AQ™, the more successful you are in your relationships, your work and in managing whatever situations you encounter.

But what is high AQ™? It's a three step process of –

- ♦ **assessing** the situation
- ♦ **adapting** skillfully to each situation
- ♦ **achieving** the right results, the right way

Track your Adaptiveness

The Adaptive Index Report is specially designed to track your adaptiveness – on seven scales. It will tell you how you tend to adapt as you think, work, listen, communicate, relate interpersonally, manage change, conflicts and problems. This insight should enable you to increase your agility by learning to vary your approach, and not becoming fixed or rigid in the way you handle a situation, task or relationship. There are several ways to handle a situation – being adaptive means, finding a better approach.

You will receive seven adaptability graphs -

- ♦ **Cognitive Adaptability** - how you tend to think and make decisions
- ♦ **Listening Adaptability** - how you listen and build understanding
- ♦ **Communication Adaptability** - how you express yourself
- ♦ **Interpersonal Adaptability** - how you build and sustain relationships
- ♦ **Work Adaptability** - how you perform tasks and projects
- ♦ **Problem Adaptability** - how you manage problems and conflicts
- ♦ **Change Adaptability** - how you manage change; the new versus the old

¹ Kenneth Rabinowitz, (1990, 1992, 1998, 2001, 2004) has conducted a series of studies measuring "high performance and success. He has found a significant relationship between Adaptive Intelligence (adaptive behavior) and high performance on both an individual and team basis.

² The concept of Adaptive Intelligence was developed and trademarked by Dr. Rabinowitz in 2002.

Your Adaptive Behavior

As you review the seven graphs, please -

- ♦ **Recognize that most people show variance from one graph to another.** In other words, don't be concerned if your D, E, B, S or I scores vary from graph to graph. Variance simply suggests that you tend to adapt differently in different roles. For example, you may be a high S listener, and a low S worker.
- ♦ **Don't be concerned with low scores.** A low score doesn't necessarily mean that you are less effective in that area. You might in fact be highly effective in that cluster, but not utilizing that tendency as much as you need to. Low scores indicate that you de-emphasize that behavioral cluster. You have to determine whether or not you are as skilled and as effective in that cluster as you need to be.
- ♦ **A low score is an opportunity.** Identify lower scores, and begin to use those behavioral clusters more often, when it seems appropriate. You can begin to "raise your AQ™", by learning to emphasize behaviors that you naturally de-emphasize (assuming that behavior is appropriate to the situation).
- ♦ **A high score is also an opportunity.** Higher scores usually suggest that you favor this cluster of behavior, and in most cases are not only more comfortable, but more competent in performing that cluster. The opportunity with high scores, is to learn to skillfully "de-emphasize" that behavior in favor of a more appropriate one that is less likely to be utilized (a low score). For example, if you are High D in the way you work (efficiency), you should adapt or shift into a different cluster when the need arises, such as a High I (precision).
- ♦ **Don't let your strengths become your weaknesses.** Be careful not to let your high scores become too extreme. If you take a strength and overdo it and take it to an extreme, it will become a weakness. For example, if you are too assertive, you begin to become aggressive. Or if you work too hard, you become a workaholic. My point is – be careful not to take any of these tendencies to the extreme, or you will find that strength is actually doing more harm than good!
- ♦ **Complete the Adaptability Plan at the end of this report.** This action plan will help you target a variety of ways to "raise your AQ™."

Cognitive Adaptiveness

Cognitive Adaptiveness is how you tend to adapt as a thinker and decision maker. It measures how adaptive you are as a thinker on five DEBSI scales –

Linear (D), Creative (E), Pragmatic (B), Circular (S), Analytical (I)

Cognitive Factor		DESCRIPTION
D Linear Thinking		Linear thinking (D) is a decisive approach that focuses on the results and bottom-line. It is decisive, efficient, clear and definitive. It is a "forward moving" type of thought process focused primarily on goals, solutions and results. Linear thought is fast. The linear thinker prefers the "ready, fire, aim" method of decision making.
E Creative Thinking		Creative thinking (E) focuses on change and growth. It is an "outer moving" type of thought process. Creative thought is loose. Creative thinking is a flexible, resourceful, big picture, conceptual, dynamic thought process that operates "out of the box." Creative thinkers prefer a "ready, flex, fire" approach to decision making.
B Pragmatic Thinking		Pragmatic thinking (B) focuses on the immediate needs. It is a careful, cautious, realistic, responsive way of thinking; one that closely "parallels" the situation. Pragmatic thought is grounded. This thought process focuses on the most immediate needs and realities. Pragmatic thinkers rely on a "ready, realistic, fire" method of decision making.
S Circular Thinking		Circular thinking (S) focuses on the process. It is a practical, reasonable, collaborative and dependable way of thinking. Circular thought is steady. It "closes the loop", seeking closure and consistency. The circular thinker prefers a "ready, practical, fire" approach to decision making.
I Analytical Thinking		Analytical thinking (I) focuses on quality and depth. It is an "inward moving" process that is highly substantive, thorough, challenging, precise, deductive and analytical. Analytical thinking is the most in-depth process. The analytical thinker prefers a "ready, aim, fire" approach to decision making.

The **Cognitive Adaptiveness Graph** measures how you think: from perception to interpretation to decision making. A high score suggests that you rely primarily on that cognitive pattern. A moderate score indicates that you limit your use of that pattern. And a low score indicates that you are less likely to effectively utilize that pattern.

Listening Adaptiveness

Listening Adaptiveness analyzes your listening patterns and preferences. It measures the degree that you emphasize and utilize each of the DEBSI listening patterns. This graph will tell you what type of listener you are—

Consequential (D), Conceptual (E), Concrete (B), Contextual (S), Complex (I)

Listening Factor		DESCRIPTION
D Consequence		Consequential listeners listen for the bottom line. They focus on results, problems, solutions, progress and goals. They tend to generalize and focus on the key point, and are less attentive to both feelings and details. They are impatient and less empathetic. They are rarely fooled, and will confront confusion or game playing. They are excellent in listening for the bottom line and consequences. They are clear.
E Conceptual		Conceptual listeners listen for the concept. They focus on ideas, opinions, progress, needs, small talk and feelings. They tend to generalize and focus on the key point, and less to the facts and details. They are bored by complexity and detail. They read people well and notice most signals. They aren't easily misled. They are excellent in picking up the key point and conveying empathy. They are aware.
B Concrete		Concrete listeners listen for reality. They focus on the situation, performance, concerns, roles, responsibilities, details, facts, progress and needs. They listen for specifics and focus mostly on the concrete aspects of the message. They are less interested in either ideas or complexity. They are excellent in listening for the concrete aspects of the message and are attentive to the situation. They are realistic.
S Contextual		Contextual listeners listen for the situation. They focus on the process, progress, responsibilities, context, consistency, concerns, feelings and needs. They specify more than generalize. They focus on people's actions and needs. They are less interested in the bottom line or the big idea. They are excellent in listening for the contextual aspects of a situation. They are both empathetic and attentive. They are responsive.
I Complex		Complex listeners listen for accuracy. They focus on the logic, facts, details, analysis, accuracy, depth and substance of the message. They tend to specify and focus on the logic, complexity and accuracy of the message. They are less interested in feelings or opinions. They are excellent in listening critically for accuracy and logic. They are less empathetic and more objective. They are knowledgeable.

The **Listening Adaptiveness Graph** measures your listening patterns. Good listeners "adapt" to the message and messenger. This graph measures your listening tendencies. A high score suggests that you rely primarily on that listening pattern. A moderate score indicates that you limit your use of that pattern. And a low score indicates that you are less likely to effectively utilize this pattern; that you are less adaptive with that pattern.

Communication Adaptiveness

Communication Adaptability measures your communication style. There are five different communication patterns (strategies) –

Pointed (D), Persuasive (E), Parallel (B), Practical (S), Precise (I)

Communication Factor		DESCRIPTION
D Pointed		Pointed communication (D) is perceived as "direct." It is often characterized as a "telling" type of communication style. It is usually "concise, clear and to the point." It is a "short, fast, louder, definitive" sounding message, that is accompanied with pointed hand gestures, direct eye contact and upright posture. Pointed communicators tend to talk more about the key point, the problem, the goal, the solution, the result. They are pointed.
E Persuasive		Persuasive communication (E) is perceived as "expressive." It is often characterized as a "selling" type of communication style. It is usually "convincing, engaging and dynamic." It is a "longer, faster, louder, flexible" sounding message. The body language is characterized as open, circling hand gestures, friendly eye contact and relaxed posture. Persuasive communicators focus more on the big picture, relationship, idea, experience, need, action or opinion. They are persuasive.
B Parallel		Parallel communication (B) is perceived as "responsive." It is often characterized as a "specifying" type of communication style. It is usually "careful, controlled and responsive." It is a "shorter, faster, softer, flexible" sounding message, with controlled hand gestures, less eye contact and "on edge" posture. Parallel communicators focus more on reality, concerns, problems, responsibilities, specifics and satisfaction. They are specific.
S Practical		Practical communication (S) is perceived as "supportive." It is often characterized as a "suggesting" type of communication style. It is usually "cooperative, realistic and supportive." It is a "shorter, slower, softer, flexible" sounding message, with limited hand gestures, steady eye contact and an attentive posture. Practical communicators focus more on feelings, needs, processes, concerns, specifics and relationships. They are amiable.
I Precise		Precise communication (I) is perceived as more "logical." It is often characterized as a "descriptive" type of communication style. It is usually "credible, substantive and logical." It is a "longer, slower, softer, flatter" sounding message. The hand gestures are more "wristy," there is less eye contact, and more of an angled posture. Precise communicators focus more on facts, logic, grammar, substance, details and precision. They are substantive.

The **Communication Adaptiveness Graph** measures how reliant you are on each of the DEBSI communication patterns. Better communicators learn how and when to adapt their communication to the listener. This means, adapting your strategy to the situation. A high score suggests that you rely primarily on that pattern of communication. A moderate score indicates that you limit your use of that pattern. And a low score indicates that you are less likely to effectively utilize that pattern.

Interpersonal Adaptiveness

Interpersonal Adaptiveness is how you tend to interact and relate to others. It is "your ability and willingness to adapt to the communication and relationship needs of the people you are interacting with." Interpersonal Adaptiveness measures your interpersonal patterns on five scales -

Directiveness (D), Expressiveness (E), Responsiveness (B), Supportiveness (S), Logicalness (I)

Interpersonal Factor		DESCRIPTION
D Directive		Directiveness (D) is pointed – a concise and straightforward interpersonal approach. Directiveness is clear and definitive. Directives expect others to be clear, concise and straightforward with them. They are annoyed by indirect, tentative and confusing behavior. Most Directives respect others that are assertive, clear and straightforward. Directives will either seek or provide "direction." Directives try to build respect into their relationships. They tend to prefer a "telling" style of communication.
E Expressive		Expressiveness (E) is persuasive – a convincing, engaging, expressive type of interpersonal approach. Expressiveness is convincing and dynamic. Expressives expect others to be flexible, open-minded and willing to share. The Expressive, because of their dynamic tendencies enjoy being with people who are more engaging and expressive. Most have a difficult time with people they feel are too blunt, insensitive or boring. They build rapport and get along well with most people they meet. They are quick to make new friends and to develop instant rapport. Expressives tend to prefer a "selling" style of communication.
B Responsive		Responsiveness (B) is parallel – a careful, helpful, realistic, grounded type of interpersonal approach. Responsiveness is simple, clear, helpful and down to earth. Responsives expect others to be helpful, realistic, responsible and of course, responsive. They enjoy people who are more controlled and moderate. Responsives often are bothered by people who are unreasonable, unrealistic, not responsible or helpful. Responsives build confidence as they demonstrate their sense of responsibility. They often prefer a "specifying" style of communication.
S Supportive		Supportiveness (S) is practical – a cooperative, reasonable, amiable, dependable type of interpersonal relationship. Supportiveness is collaborative, empathetic, reliable, trustworthy and amiable. Supporters expect others to be trustworthy, practical, reasonable and collaborative. They enjoy people who they trust and depend on, and have an amiable nature. Supporters are bothered by people who are too pushy, deceptive, unreliable, impractical, aggressive or unreasonable. The Supporter is a trust builder. They usually prefer a "suggesting" style of communication.
I Logical		Logical (I) is precise – an articulate, rational, fair, objective, inquisitive and credible type of interpersonal relationship. Logical behavior is objective, analytical, substantive, deductive and fair minded. Logicals expect others to be knowledgeable, logical, factual, inquisitive and committed to quality. They enjoy people who are credible and articulate. Logicals are bothered by those they view as inarticulate, sloppy or lazy with details, illogical, imprecise, not in the "know," too subjective and emotional. Logicals build credibility. They prefer a "descriptive" style of communication.

The **Interpersonal Adaptiveness Graph** measures how you adapt to individual needs as you communicate, listen, negotiate and relate to others. A high score means that you rely primarily on that interpersonal pattern as you build and sustain relationships. A moderate score indicates that you limit your use of that interpersonal pattern. And a low score suggests that you are less likely to make effective use of that interpersonal pattern.

Work Adaptiveness

Work Adaptiveness is the "ability and willingness to adapt the way you work on tasks and projects." Similar to cognitive and interpersonal adaptiveness, we use DEBSI as the foundation for understanding adaptive behavior. You are measured on five work scales -

Efficiency (D), Innovation (E), Implementation (B), Reliability (S), Thoroughness (I)

Work Adaptiveness Factor		DESCRIPTION
D Efficiency		Efficiency is shaped by goals and objectives, along with an overriding emphasis on results. Working efficiently usually means getting enough of the right things done. Efficiency is dependent on several factors; planning, organization, streamlining, implementation. The key to efficiency is finding the quickest, shortest, simplest way to produce as much of the right outcome as is needed. There is less emphasis on quality (how well something is done), and more emphasis on productivity (getting the most accomplished). Efficiency is driven by the need to produce value. And "ROI; a return on investment."
E Innovation		Innovation is "creating a better outcome." Innovation means change, whether it is doing something bigger, better or different. This approach is characterized as a fast paced, unstructured, variable way of working. The goal of innovation is to improve, expand or modify something. The emphasis is on the outcome, and less on the process. Innovation requires a certain degree of creativity, conceptualization, practicality, flexibility and variation. The more innovative you are (change), the less reliable (consistent) you become. Innovation is driven by the need to create change and growth.
B Implement		Implementation is "a balanced, hands-on, responsive way of working, with a focus on completing the most immediate task." It is characterized as a moderate, by the book approach that focuses primarily on the most immediate and pressing needs. Implementation is hands-on; rolling up your sleeves and doing what's needed. People who are implementation oriented try to be both responsive and responsible. They "implement, operationalize, maintain and fulfill their responsibilities."
S Reliability		Reliability is "meeting and exceeding expectations and needs through a steady, methodical approach." How you do something becomes more important than the outcome itself. In other words, the process overrides the outcome. Doing it the right way is what reliability is about. "The ends do not justify the means." Shaped by process, roles and responsibilities, reliability is a steady, consistent way of getting the job done. Consistency, follow through and closure are characteristics of this process driven approach to work. Innovation, which is characterized as variable and inconsistent by definition, is usually de-emphasized as reliability is emphasized.
I Thorough		Thoroughness is "working in a more detailed, logical, exacting way." Thoroughness is a process oriented way of working, with the emphasis on quality, details, depth, analysis, logic and accuracy. Working thoroughly means, going into as much depth and detail as needed. The emphasis is on quality, and not on efficiency. The more thorough someone is, the less efficient they are. Thoroughness often involves additional steps and processes such as checking, verifying, deliberating, analyzing and testing. The more thorough you are, the less efficient you become.

The **Work Adaptiveness Graph** measures your work patterns. It measures how you work on tasks and projects by scoring how efficient, innovative, implemental, reliable and thorough you tend to be. A high score suggests that you rely on that work process to a large extent. A moderate score suggests that you limit your use of that work pattern. A low score indicates that you are less apt to utilize that pattern effectively.

Problem Adaptiveness

Problem Management Adaptiveness is the “ability and willingness to adaptively manage problems and conflicts”. There are five equal, but different approaches or strategies that should be used when adapting to the various problems and conflicts that occur –

Confrontive (D), Constructive (E), Controlled (B), Collaborative (S), Challenging (I)

Problem Mgt Factor		DESCRIPTION
D Confrontive		Confrontives are quick to confront a problem or conflict. They are outspoken and direct. They tell it like it is, and are known for being straightforward and confrontive when they need to be. They try to be "fair and clear" as they manage problems and interpersonal conflicts. They are more definitive and less flexible. They are assertive, and if they aren't careful, can become aggressive by being too confrontive and demanding. Confrontives on the other hand, are often respected for their willingness to speak their mind. They expect solutions.
E Constructive		Constructives are quick to confront a problem or improvement. They are opinionated and persuasive. They are diplomatic and selective in how much they challenge or confront. They are upbeat and encouraging; with the primary goal to improve the situation. They are more flexible and less definitive. Given the Constructive's less direct and confrontational style, they need to be careful of not being viewed as having hidden agendas, of being evasive or even manipulative. They encourage cooperation and expect effort and progress on the problem or conflict.
B Controlled		Controllers are quick to voice their concerns. They are realistic and aware. They expect prompt solutions and improvements. They are most interested in dealing with the immediate situation. They become nervous if they don't see remedial action. They are responsive. They expect improvement. They expect responsiveness. They use more of a cautious and controlled approach in dealing with conflicts and problems. They expect prompt action.
S Collaborative		Collaboratives are quick to cooperate with others. They are practical minded and expect teamwork, cooperation, trust and dependability. Of the five patterns, Collaboratives tend to be most accepting and have a tendency to avoid difficult conflict situations. They are more assertive with problems and less with interpersonal conflicts. They expect process improvement. They become bothered by politics and distrust. They are more flexible and less definitive. They are empathetic. They work steadily to resolve problems and conflicts. They believe in "better together." They expect support.
I Challenging		Challengers are quick to challenge both problems and conflicts. They are analytical and rational in their approach. They are bothered by superficiality and mistakes. They are more definitive and not particularly flexible. They analyze problems with facts and logic and will struggle with the problem until they see a marked improvement. With interpersonal conflicts, they demand a high degree of fairness and objectivity. They assertively challenge situations that they feel are wrong or unfair. They expect others to analyze problems, think logically, be factual and fair minded. They drive quality.

The **Problem Adaptiveness Graph** measures your most natural and reflexive ways of handling both problems and conflicts. A high score suggests that you rely primarily on that problem management pattern. A moderate score indicates that you limit your use of that pattern. And a low score indicates that you are less likely to effectively utilize that pattern. The key to Problem Management is to apply the right strategy to the right problem and conflict situation. Learn to become more adaptive, by developing your skills and use of each of the DEBSI strategies.

Change Adaptiveness

Change Adaptiveness is “the ability and willingness to successfully adapt the new with the old; to manage the change process”. There are five different approaches to change –

Driving (D), Encouraging (E), Balancing (B), Steadying (S), Integrating (I)

Change Factor		DESCRIPTION
D Drive		D's drive change. They are goal oriented and push for results and success. They initiate change when they believe it increases productivity and achievement. They are “linear” minded, working hard to stay on course. They become bored with too much stability and bothered by mediocrity. They drive change in their quest for better results.
E Encourage		E's are proactive with change. They encourage change, as they promote growth and variation. They are quickly bored by process and too much stability. They trigger change, viewing it as an opportunity to do things better. As a result, E's seek out change. They try to make the best of negative change. They encourage growth and change.
B Balance		B's are responsive to change that they think makes sense and can be quickly applied to their situation. They try to balance change, as they focus on the "here and now." They are often suspicious of too much change, too fast. They are cautious and controlled. They try to keep the current situation afloat and to keep things working. They "balance" the new with the old.
S Steady		S's like gradual change. They try to stabilize and steady new situations. They prefer the "old to the new," based on their concern with consistency and reliability. They want to understand how the change will impact them and others. They try to build a system or process to handle change. They feel that "if it's not broken, don't fix it." They "steady" new situations with plenty of process and common sense.
I Integrate		I's like change when it “improves” their situation. They incorporate the new with the old, when they think it adds quality; depth, precision, substance, knowledge. They look for opportunities to learn, to improve on something, and to analyze the situation. They fix what is broken and try to ensure that “things” are done right. They “integrate” the new with the old.

The **Change Adaptiveness Graph** measures how you tend to manage change and stability. As in the other DEBSI Graphs, there is no right or wrong score. This graph shows you how you tend to adapt to change, and how you negotiate the new with the old. A high score means that you rely primarily on that pattern as you adapt to change and stability. A moderate score suggests that you limit your use of that change pattern. A low score indicates that you shy away from that pattern, and are less comfortable utilizing it as an adaptive strategy.

You can learn to manage change better, by "matching" the right DEBSI "strategy" to the right situation. This means, that you will want to become more comfortable and competent when applying each of the DEBSI change strategies.

Summary of Your Adaptive Patterns

The table below summarizes your adaptive patterns from the seven preceding graphs.

High scores suggest a strong reliance on that adaptive pattern. The higher the score, the more likely you are to excel in that skill area. Moderate scores indicate a more restrained (and moderate) use of that adaptive pattern. Low scores suggest less reliance or use of that pattern. The lower the score, the less effective we tend to be in that particular cluster of skills.

Adaptive Dimension	High Adaptability	Moderate Adaptability	Low Adaptability
Cognition How you think	Pragmatic Circular	Creative	Linear Analytical
Listening How you listen	Contextual Concrete	Conceptual	Consequential Complex
Communication How you express yourself	Pointed Parallel	Persuasive	Precise Practical
Interpersonal How you relate to others	Expressive Directive	Responsive	Supportive Logical
Work How you work	Innovative Efficient	Implemental	Thorough Reliable
Problem How you manage conflicts/problems	Controlled Confrontive	Challenging	Constructive Collaborative
Change How you manage change	Integrative	Steady Driven Balanced	Encouraging

Your Work Style

The final section of the Adaptive Index is the Work Style Inventory® Report. This report takes the data generated about your Personality and Adaptive Performance, and describes your Role Performance (leadership, sales, project management, service, employee.)

Please note this report is written in generalities. You should view it as a series of generalities that "are mostly correct." As you read through your Work Style Inventory Report, ask whether you think this behavior is more likely and more characteristic of the way you tend to perform this role.

Work Style Inventory® is a registered trademark of Professional Development Group, Inc. All Rights Reserved.

The Developer Style

“Strong, Productive, Independent, and Accurate”

You have a **Developer** leadership style. You are a strong, decisive manager who produces high quality work. You work efficiently as you look for innovative ways to get the job done. You are accurate and logical as you work.

You are an achiever. You work hard to produce new and better results. You try to develop better ways to get the job done. You are flexible, direct, and accurate.

Your most striking traits are your:

- | | | |
|----------------|------------------|-----------------------|
| ▲ productivity | ▲ innovation | ▲ decisiveness |
| ▲ accuracy | ▲ persuasiveness | ▲ results orientation |

How You Manage Projects

Your project management style is results oriented. You are more focused on the end point of the project, than on the process. This suggests that you will drive and guide the outcome, with less emphasis on work process.

In addition to being results oriented, you are also quality oriented. This suggests that you will drill down and ensure both the precision and thoroughness needed to do a good job. You expect and demand quality output.

You are both direct and persuasive with the project members. You also try to be logical with others, particularly as problems emerge.

You are assertive and outspoken. You “tell it like it is”. You confront problems and conflicts in a timely manner. While you try to influence the outcome, you will also direct it as well.

You produce results with and through others. You can be either flexible or direct. You focus on results, while you emphasize accuracy and precision. You confront and challenge as well as encourage and motivate. When push comes to shove, you are more likely to be more directive, confrontive and challenging.

You are fairly efficient, and reasonably well organized. You move the project forward and keep up with the requirements.

To maximize your project management, you should pay more attention to process, be more supportive, and collaborative. You tend to be less supportive and tolerant of different work patterns. You are also more of an individualist, than you are a team player. You rely more on individual effort and less on team process. And as mentioned earlier, you tend to de-emphasize the work process, which in turn produces less consistency and structure.

Overall, you are a dynamic leader who will produce high quality results from your project team.

The Developer Style

How You are Perceived

Most people will perceive you as:

- ▲ strong willed
- ▲ dynamic
- ▲ logical
- ▲ directive
- ▲ decisive
- ▲ productive

How You Think

Developers are clear thinkers. You are logical. You look for causality (cause and effect) and for sequences. You also tend to think in more definitive ways. You prefer being able to categorize and generalize about things and people. Developers are usually clear about their opinions, expectations, and goals. You are a faster thinker, working hard to reach a clear judgment. You are quick to react and judge.

How You Work with Others

Developers are direct with others. You are usually fairly straightforward. You try to be clear and uncomplicated in your relationships. You set clear expectations and commitments. You expect the same from others. You build respect and are less inclined to make people feel comfortable or at ease. You fear complacency and tend to push for results and action. People will usually respect you more than enjoy you. They will usually see you as driven, serious, and less casual. You are seen as strong, decisive, and results-oriented.

How You Work on Tasks

Developers are efficient, productive, and innovative. You work quickly as you "zigzag" your way towards achieving your goals. You are highly goal oriented. You are also fairly accurate in your work. Most of your work is accomplished quickly, flexibly, and correctly.

How You Make Decisions

You are decisive. While you often seek out input, you seem to know how much information you need before making a decision. You will take risks and focus on value — the return on your investment.

The Developer Style

How You Supervise

You are a strong supervisor. You like to direct and influence. You tend to delegate and hold people accountable. You set clear goals and expectations.

You command respect as you establish your credibility. People believe in you.

Administrative Performance

You are well organized. You are efficient and prioritize well. You are fairly accurate, despite working at a brisk pace. You are good administratively. You attend to details and work efficiently.

How You Communicate—"Telling & Selling"

You like to "tell." You are direct and clear. You also "sell" by persuading and influencing others with your opinions and ideas. You are articulate — careful with your words.

Developers are often less attentive listeners. You tend to become impatient and often cut the sender short. You listen well for key points, but are less interested in subtleties and details.

What Motivates You—Productivity

You are often motivated when you feel:

- | | |
|--|---|
| ▲ people are straightforward | ▲ you have the freedom to do your job |
| ▲ problems are dealt with directly | ▲ things are well-organized |
| ▲ work is accomplished efficiently | ▲ expectations are clear |
| ▲ people are assertive and direct with conflicts | ▲ you possess increased control and authority |
| ▲ decisions are made quickly | ▲ people produce the right results |
| ▲ goals are clearly stated | ▲ you are challenged |

You are often demotivated when you feel:

- | | |
|-----------------------------------|---------------------------------|
| ▲ tentative behavior | ▲ inefficiencies |
| ▲ indirect communication | ▲ disorganization |
| ▲ details and in-depth analysis | ▲ confusion |
| ▲ an over-emphasis on the process | ▲ avoidance |
| ▲ a lack of control | ▲ unclear or vague expectations |
-

The Developer Style

Your Strengths

You possess many strengths. You are:

- ▲ decisive
- ▲ direct
- ▲ productive
- ▲ assertive
- ▲ clear
- ▲ goal oriented
- ▲ efficient
- ▲ bold
- ▲ well organized
- ▲ logical
- ▲ strong willed
- ▲ concise

How You Like to be Treated

You tend to want others to be:

- ▲ efficient
- ▲ decisive
- ▲ concise
- ▲ outspoken
- ▲ assertive
- ▲ responsive
- ▲ independent
- ▲ direct
- ▲ productive

How You Like Others to Work

You like others to work:

- ▲ quickly
- ▲ efficiently
- ▲ decisively
- ▲ on outcomes
- ▲ on solutions
- ▲ in an organized way
- ▲ on the bottom line
- ▲ logically
- ▲ on their own

What You Like to Work On

You often prefer working with:

- ▲ new tasks
- ▲ risks and opportunities
- ▲ variation
- ▲ problems
- ▲ more on the outcome, less on the process
- ▲ more autonomy and accountability

The Developer Leadership Style

When You are at Your Best

You often work best when you are given:

- | | | |
|------------------|---------------|---------------|
| ▲ responsibility | ▲ problems | ▲ respect |
| ▲ autonomy | ▲ variation | ▲ recognition |
| ▲ challenges | ▲ clear goals | ▲ order |

What You Can Do to Maximize Your Style

While you have many strengths, you usually have to minimize five natural weaknesses which tend to characterize your style. You tend to be:

- ▲ Rushed— Slow down. You tend to rush others. Take the time to relate to others.
- ▲ Too inflexible— You tend to become "fixed" in your thinking. You should try to be more flexible—consider other options and possibilities.
- ▲ Less empathetic— Try to show more concern for others' needs and feelings.
- ▲ Abrupt— You are often seen as too abrupt, forgetting to add the extra words or pleasantries most people find reassuring and friendly. Add phrases such as "would you," "could you," and "please" to your approach.
- ▲ Too bottom-line— Try to show more interest and patience with methods, procedures, and needs.

Summary

Overall, you are a results-oriented manager who makes things happen. You are clear and direct and you know how to produce the right results.

You set clear expectations and create a fast-moving, efficient work environment. You are decisive and build results. You are a strong, confident leader, focused on the "big picture."

You are both direct and persuasive with others. You can build rapport, respect and credibility as you work with your project team.

To improve your project management, you need to pay more attention to the process, build more teamwork and be more supportive and accepting.

Overall, you have a dynamic project style that not only gets results – you ensure high quality results as well.

Adaptiveness Plan

Adaptiveness Plan

1. To what extent do you agree with your Adaptive Index Report?

- _____ I agree with the majority of the report
- _____ I agree somewhat with the report
- _____ I disagree with the majority of the report

2. Please review the Personality Section and identify what you think are the most significant points made about your personality.

3. Next, review your strengths and weaknesses section and list what you believe are the –

Three greatest strengths you want to build on –

Three weaknesses you want to limit and control –

4. In the Consistency Section of your report, please comment on the interpretation given for each of your D, E, B, S, I traits. How consistent are you in applying the DEBSI traits?

D - _____

E - _____

B - _____

S - _____

I - _____

Adaptiveness Plan

5. Next, let's go to the Adaptiveness Section. Please complete the Adaptive Improvement Table below, using the seven Adaptability Graphs. The goal is to identify specific actions you can take to raise your AQ□ - *to become more agile and more successful.*

Adaptive Improvement Table

Adaptive Dimension	Your interpretation	What you will do better ...	What you will do more of ...	What you will do less of ...
Cognitive				
Listening				
Communication				
Interpersonal				
Work				
Problem/Conflict				
Change				

Adaptiveness Plan - Setting Goals

Raising your AQ□ isn't easy. It requires you to "operate beyond your comfort zone". And to be vigilant to follow the "Three Step Process" –

Assess – determining what's needed

Adapt – adjusting to the situational needs

Achieve – adding value to whatever you do

You'll have more Adaptive Success, by setting goals that are SMART –

Specific – targeted enough so that you can measure your efforts and success

Milestones – successes and outcomes that tell you that you are progressing and succeeding

Attainable – set goals that are within your reach

Relevant – work on goals that will have a significant impact on you and others

Timed – set a time frame to measure your milestones and success

Please complete the Adaptive Goals Table below. Good luck, and keep on "*raising your AQ□*"

Adaptive Goals Table

Adaptive Goal	Milestones	Measures	Status	Time Frames
